About
Us

We are a well-established Italian software development and consultancy company that for forty years has designed and realised integrated digital solutions to assist companies in reorganising their processes.
Our various business units are specific centres of competence, autonomous yet in continual dialogue, that deliver specialist products and services to companies and professionals.

Mission & Vision

—

Our aim is help companies innovate in order to contribute to their advancement, facilitating digital transformation and continuous improvement, pursuing each project with a personalised approach to deliver effective and bespoke solutions.
We aim to satisfy every need of each corporate area, while continuing to be recognised as a leading-edge company offering expert and functional solutions.

Business —Unit

JGALILEO

Complete and modular ERP (Enterprise Resource Planning) management software that meets the needs of the entire corporate process in an integrated way. Designed and developed to best satisfy the typical needs of each market, it enables the coordination of the company supply chain without wasting time or resources.

SMITECH

Data protection solutions that enable companies to improve IT security and efficiency: cybersecurity services, IBM Power Systems solutions, IT infrastructure projects and privacy and GDPR consultancy.

NEXTBI

A suite for business intelligence, performance management and customer intelligence. It focuses on budget and control, analytics, strategic simulations, algorithms and instant intelligence so that all data is monitored in real time.

ECM

The complete software solution suitable for all company processes that provides all the necessary tools to fully manage the entire life cycle of digital content.

DISCOVERY QUALITY

A suite that manages corporate governance, the quality management system and all processes.
Coordinates in a proactive and structured way the various bodies involved, whether internal or external, and enables monitoring of all processes using enhanced analytics.

4WORDS

Integrated solutions for web and online sales: government portals, e-commerce, B2B portals, apps for the sales network and technical support, as well as CRM, augmented reality, PIM (product information management) and digital marketing services, consultancy on SEO, UX and UI design.

FACTORY

A suite to increase the level of customer service, reduce warehouse inventory, optimise the use of company assets and maximise profit, cutting costs. It meets all the requirements of the supply chain and of factory-of-the-future operations.

JPA

Business process management software ideal for creating, managing and automating company processes. Integrates and manages the processes of multiple organisations and systems, managing all resources automatically.

JPM

Project management software that facilitates target achievement by simply and effectively assisting companies in managing their projects.
