

For us **GREEN LOVE®** is much more than a slogan

GREEN LOVE® is the symbol that identifies our commitment to environmental protection and we place it on each of our products, because in production there is all our responsibility.

We consider our impact on people and on planet in everything we do and produce. We never stop wondering how we can still contribute to make the world better.

Tomatto is a brand friend of 

For years we have started an internal policy to minimize energy waste on several levels, but we are going further: we are using suppliers who have the same vision as us, because the difference is made if all together, we work towards improvement.

More and more **clean energy** for our production

Making a difference for the environment means wanting to continuously invest in technologies and solutions that allow control over the amount of energy used.

Our goal is to be able to become self-sufficient in terms of energy using almost exclusively renewable sources.

For this reason we will install a new photovoltaic park capable of satisfying the energy demand of our production and processing plants.

The real **zero km** in the world of housewares

GREEN LOVE® is much more than a slogan, we invest for the future of the planet and our customers are part of this pro-environment mission. Tomatto is a brand friend of 

For years we have been selecting among our partners companies that are territorially close to our production plant to reduce CO2 emissions and for greater control over the supply chain.

Our environmental commitment is concrete, in fact almost all of the raw materials are of Italian origin and the processing waste is totally recovered and destined for a new life.
