

SOLUTION FOR ACCESS CONTROL

Intelly Scan

Thanking you for your kind request, we bring to your attention our integrated solution for access control, security and video analysis.

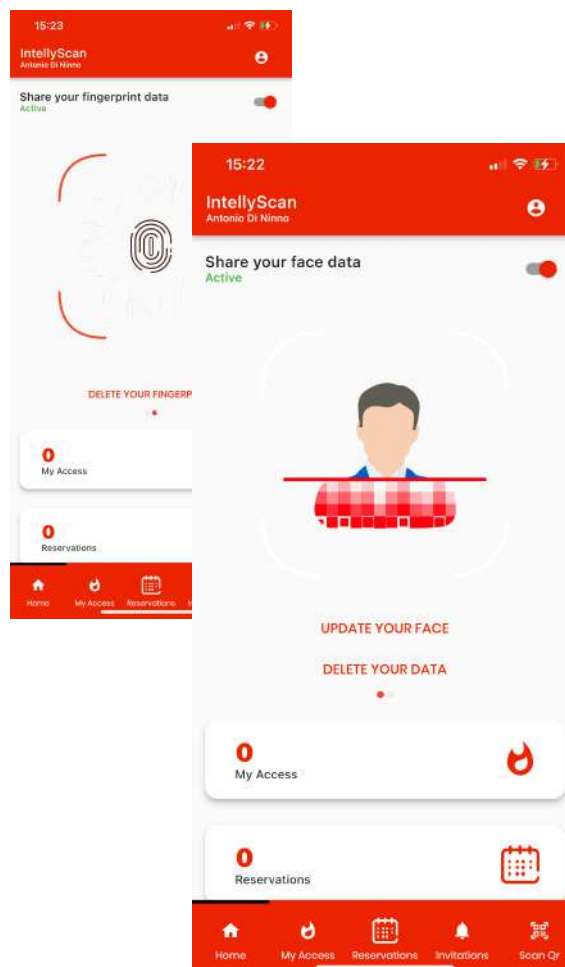

Introduction

IntellyScan offers a wide range of solutions to protect people's safety using techniques and methods developed specifically for the treatment and management of personal data:

- ✓ WE CONTROL access flows to buildings and protected areas
- ✓ WE MEASURE PRESENCES by interfacing with personnel management systems
- ✓ WE MONITOR AND PROTECT corporate environments and assets

With IntellyAccess, the mobile application for smartphones, we manage the consent and processing of particular biometric data thanks to a sharing and explicit consent system carried out directly within the application.

General Features

MODULAR

IntellyScan is a SaaS solution that allows you to keep up with the times and technologies thanks to the possibility of activating additional modules at any time, thus safeguarding the initial investment.

DISTRIBUTED INTELLIGENCE

The distributed intelligence architecture allows you to centrally control and manage sites both online and offline.

INTEGRABLE

IntellyScan is a complete system able to manage presence detection, access control, automation and artificial intelligence through the use of tablets, relays and cameras.

MULTI-COMPANY AND MULTI-SITE

Made for small and large companies, IntellyScan easily adapts to the needs of any company or activity thanks to the possibility of easily activating new modules and adding new users or terminals.

STARTER VERSION

It manages the entrance tablets for access control and attendance detection through the use of the IntellyAccess mobile application and thanks to the local server and intelligent relays it is possible to manage the automation of doors, turnstiles and use the facial recognition functions through the use of [compatible IP cameras](#).

STANDARD VERSION

The standard version removes all the limitations of the starter version by adding the possibility of using badges and fingerprints, managing offline attendance registration and booking and time tracking services.

PREMIUM VERSION

Get maximum performance with the premium version which offers advanced surveillance services thanks to artificial intelligence and video analysis and allows you to use the [API library](#) for integration with third-party applications and CRMs.
