

**Standout security,
passionate people**

Fichet Bauche®

Feel secure in the knowledge that we protect your property as if it were our own and trust our 200 years of history as a guarantee of strength: you can always depend on our safes, locks and other security solutions to protect what you truly value.

**Fichet Bauche:
Standout security,
passionate people**

Know-how, with commitment.

Fichet still builds on its unique heritage with know-how secrets that differentiate us.

Our strengths are technical expertise, the quest for innovation, fully mobilised teams and a permanent commitment to the quality of our products. We preserve these strengths by keeping control over all manufacturing stages to ensure compliance with the most stringent standards. Material sourcing, product R&D, team training, production, maintenance, client advice, services—nothing is ever left to chance.

Trust, with determination.

We offer more than just property protection systems to our clients: our business is based on their trust and peace of mind.

A business where knowledge, expertise and experience are used to achieve concrete results and high performance. Trust is key to all activities: we are determined to rely on solid and lasting relationships between our sales staff, distributors and clients—based on a combination of real listening, reactivity and resourcefulness.

Excellence, with responsibility.

Always uncompromising about the quality of our products, materials and locks, we are committed to maintaining our historical position as a reference and leader in the market. We work hard to guarantee a high level of production control and therefore of quality.

Hence strict demands we always comply with but never to the detriment of our CSR commitments. We always take the more sustainable approaches to our production methods and purchases, to recycling of our materials, to saving energy and to fostering eco-design for our products. We act with balance and responsibility.

Innovation in our DNA

In 1825, Alexandre Fichet invented the first non-pickable pump lock.

A few years later, Auguste-Nicolas Bauche created the first modern fireproof safe. These two pioneering engineers revolutionised the world of security—and firmly placed research and development at the heart of our brand.

200 years later, we preserve their heritage and continue to design, produce, advise on and market the best-performing safes, cabinets, vaults and security doors on the market.

Fichet Bauche R&D teams play a central role in the value chain of our production plant.

We are always on the lookout for new materials and develop exclusive Fichet Bauche 'recipes' to ensure the high performance of our products and their level of resistance.

for over two centuries

For example, a PhD student in concrete technology is currently studying the design of our barrier materials. In the last 20 years, we have thus managed to reduce the weight of our safes by 30% while increasing their resistance levels. We continue to innovate, always.

As master locksmiths for 200 years, we have continued to develop and manufacture our exclusive locks. This is one of the key strengths of our safes and a guarantee of high security.

Our choice is to ensure permanent investment in R&D, always looking for more functionality, more resistance, new materials and more advanced lock technologies. Above all, we remain in permanent search of adequate solutions answering our customers' new lifestyles and needs.

Safes

Burglary is a real threat for both professionals and private individuals. It is therefore essential to place your valuables under the protection of certified safes.

Fichet Bauche safes are ergonomic, elegant and customisable, offering the highest levels of burglary resistance—and much more besides. Depending on models, our safes can also provide optimal resistance to fire and explosives with certifications that comply with the most stringent international standards. In addition to their ergonomic features for ease of use and aesthetic finishes, they allow for a wide range of options enabling you to define the solution that best meets your needs in terms of performance, appearance and storage volume.

Complice

Unique French manufacturing

Full control is key to high performance. Our choice is to control the entire value chain of our products by keeping all stages of manufacturing, all specialist trades and expert skills in our own factory.

- + Careful research of raw materials.
- + Design of solutions by an integrated R&D team.
- + Production lines separating safes from locks to ensure high confidentiality.
- + In-house industrial manufacturing for nearly 200 years.
- + Expert master locksmiths at the factory.
- + Local after-sales service and technical follow-up to support all customers with confidence.

Our know-how thus remains in the service of high security.

Preserving quality of our products

Within the walls of its factory, Fichet Bauche develops proprietary composite materials and exclusive alloys that enable us to remain leaders in high security solutions.

The design circuit we implement guarantees the confidentiality of the association between your safe and its lock. This makes sure only customers – not even factory staff – have access to this key information.

Our products are subjected to the most stringent tests approved by insurers and A2P-certified by France's National Centre for Prevention and Protection (CNPP).

This is the result of integrating our own test laboratory into our factory to impose conditions going even further than those of certifying bodies. Installation is also carried out by our own technicians to ensure certification of your safe is always preserved.

Compliance with norms is our standard practice. Going beyond, too.

CSR: a key dimension of our strategy

For us, perfect balance is achieved when high quality requirements can be matched by our commitment to reducing our environmental impact.

Eco-design is therefore integrated into our process from the moment we define the choice of our suppliers, the materials to be selected according to criteria determined by our purchasing and R&D teams, and our industrial processes.

While maintaining the high quality of our products, we manage to develop new materials with our integrated experts and to reduce the weight and energy consumption of our products by improving performance.

25% of all steel used to produce safes comes from recycled steel

60% of packaging material for safes comes from recycled material

91% of safe mass using easily recyclable materials
